

# Guiding You to Success

By turning data into biological insight

**Fios Genomics** use data science solutions and drug development expertise to **guide your program to market submission.**

We understand and explain what your data means biologically, not just statistically

We support you bioinformatically at each stage of development (discovery, pre-clinical & clinical) providing insights to direct next steps

Our ability to analyse 'omic, non-omic and meta data, including multi-omics, enables us to uncover the full picture hidden in your data

## How we do this

### We clean and prepare your data

Ensuring data is robust, comparable and ready for confident interpretation.

### We identify what is truly changing

Using statistical analysis to identify pathways that differ between conditions.

### We explain biology, not just numbers

Using pathway analysis to place changes into biological context.

### We account for real-world complexity

We understand and explain how study design, metadata and confounding factors influence analysis results.

### We connect multiple data types

We can integrate primary data with other 'omics e.g. proteomics/metabolomics for a more comprehensive biological view.

## Benefits of working with us

### Expert support

You can rely on proven drug development expertise across all development stages.

### Biological insights

You will receive a clear biological narrative supported by an interactive, fully-transparent report.

### Confident conclusions

Our analyses provide confidence in your study conclusions.

### Evidence-based decision-making

Our results provide strong evidence for publications, decision-making and investment strategies.

### Know your next step

Deep analysis result interpretation reveals the natural next step of your research.
